

LOOK FOR STRONG SILVER PRICES

Far East Prosperity Inspires Demand for More of the White Metal.

INDIA IS LIKELY TO ENTER MARKET

Reserve of Coined Metal in India Is Low at the Present Time.

The recent advance in the price of silver, which has carried the quotations up to a point not previously reached since the first quarter of 1908, seems to be well held. The sharp break which followed the increase in the Indian duty on the metal was, as predicted at the time, only temporary, and the price quickly recovered and even advanced. The current quotation of 54c in New York and 24 1/2 in London is 2 1/2 above the average of last year, and the general tendency seems to be upward. As usual, the advance comes chiefly from increased demand from the far east, which is now, as it has been for a long time, the ruling factor in the silver market, says the Engineering and Mining Journal.

Perhaps the more important cause for this larger demand is found in the improved conditions in India, resulting from two years of good harvests. The people are generally prosperous, their buying power has been increased, and, according to their immemorial custom, the surplus is being invested in silver in various forms. This cause is a familiar one and needs no special comment; it works now as it has in former years. China has also contributed to the larger demand. In January and February the shipments to that country were large, but since then they have fallen off, and the Chinese banks have transferred some of their silver to India to payment of rice bills and in actual sales. The excess of the Chinese demand are more complex. The long-continued depression of silver and the consequent low rates of exchange have tended to an increase in the exports of merchandise and a decrease of imports, leaving a larger balance to be paid for in money—that is, in silver. Moreover, there has been a steady increase in prosperity in that country, so that the home industries now supply many of the articles of daily use formerly imported, and this again tends to improve the export balance, which must be paid in silver. The results of the causes outlined are shown in the following table.

The principal exports from London to the east for the four months ended April 25 were:

	1909.	1910.	Change.
India	£1,471,800	£2,117,500	£645,700
China	£1,038,200	£1,113,500	£75,300
Others	£2,800	£2,800	£0
Total	£2,512,800	£3,233,800	£721,000

The increase here in the approximate amount of 28 per cent, a little less than in proportion than that in values. The Straits are no longer takers of silver, since the gold standard was established there.

Outside of the shipments to the far east there have been some minor causes for increased demand. The demand for large quantities, either for coinage or for use in the arts, which usually accompanies a period of increase in prosperity, has also been a factor. The demand for silver for coinage and for use in the arts, which usually accompanies a period of increase in prosperity, has also been a factor. The demand for silver for coinage and for use in the arts, which usually accompanies a period of increase in prosperity, has also been a factor.

The improvement in the silver market has not been accompanied by any increase in our own sales of silver. The exports from and imports into the United States for the four months ended April 25 were as follows, in value:

	1909.	1910.	Change.
Exports	\$19,456,181	\$18,328,081	\$1,128,100
Imports	\$14,676,355	\$15,238,434	\$562,079
Net exp.	\$4,779,826	\$3,089,647	\$1,690,179
App. ex.	\$2,544,600	\$3,929,550	\$1,384,950

This shows a decrease of 35.9 per cent in the approximate quantity of the net exports. The imports are in many cases the cause for it are still operative. As to the near future, it is to be expected that the demand from the east will continue large for some time to come, as the cause for it are still operative. Moreover, the reserve of coined silver in India is reported to be rapidly decreasing, and it is not unlikely that the Indian government will soon be in the market as a buyer for coinage purposes, for the first time in three years. This will add to the demand and again improve the price.

Ore Shipments.
The Utah Ore Sampling company on Thursday released seven cars of ore from Utah camps.

FIRST CAR OF ORE REACHES MARKET

Noted Kearsarge Mine Gives Up Ores After Years of Idleness.

VERY DULL SESSIONS ON LOCAL EXCHANGE

Thursday was a very quiet day on the exchange, there being sales for 13,200 shares of stock, the market value of which was \$465.75. Nevada Hills was active at \$4.00, Nevada Hills was active at \$4.00, Nevada Hills was active at \$4.00.

There was a general feeling of pessimism, and the market was dull. The price of silver was 54c in New York and 24 1/2 in London.

NEED GOOD NEWS FROM THE MINES

Nothing Else Will Encourage Return of Money to Local Market.

FEW STRIKES WILL DO THE BUSINESS

Tintic District Getting Into Shape to Bring Results of Much Interest.

What are the prospects for a revival of interest in the Tintic mining propositions?

This was the question put to a well-known broker on Thursday. His answer, carefully prepared, will prove to be interesting reading. He said:

"The eastern market conditions do not have any direct effect on the local situation, which is governed almost entirely by local conditions. I do not ignore the wide market created for Utah stocks, especially the Tintics, in the last year, for were local conditions what they should be eastern investors are as liable to return to our market as they ever were. The main trouble is right here in Utah. We lack stirring mine news."

We are passing through a hard period, but the average investor will not ignore a chance to make money. The main trouble is right here in Utah. We lack stirring mine news."

DRILL COST DOWN IN ARIZONA

Depends Largely on Ground, but an Average Can Be Figured.

Cost of Drilling.

Churn drills have been used quite extensively in exploring some of the low-grade copper ore bodies in Arizona, and in a recent issue of the Wisconsin Engineer W. C. Weber describes the method of drilling in the Miami district, and also gives some cost data on this work.

A drilling crew usually consists of two men, one driller and one helper or tool dresser, each crew working a 12-hour shift. The drills are generally owned and operated by the mining companies. The accompanying cost data, Miami district, are based on an assumed life of four years per machine. An outfit, with tools sufficient to operate four years, is said to cost in the neighborhood of \$800.

Roads usually must be built to carry the machines to the drilling locations and to serve for transporting fuel. On the fair slopes of the Miami district, 25 cents is stated to be an average cost per lineal foot of road.

Cost of Drilling.
Labor—
Two drillers at \$5 per day.....\$10.00
Two helpers at \$4.50 per day.....\$9.00
The sampler at \$1 per day.....\$1.00
One foreman at \$6 per day (two machines).....\$12.00
Roads.....\$1.14
Labor at \$2 per day.....\$4.00
Foreman at \$4 per day.....\$8.00
Assays, cap and fuel.....\$1.00
Tools, etc.....\$1.00
Coal, coke, oil, etc.....\$2.00
Water.....\$1.00
Teaming.....\$1.00
Interest at 5 per cent and depreciation.....\$1.00
Total cost per foot of hole.....\$27.00

The monthly average of the cost per foot of hole drilled varies with one company from \$2 to \$25. In another instance, where the ground is harder, the cost per foot has run as high as \$5. When drilling is the only means of development being used, the cost of the cost of camp maintenance and incidentals considerably swells the cost account.

ALASKA RESOURCES ARE TO BE OPENED UP

SEATTLE, Wash., May 26.—S. W. Eccles of New York, directing head of the various Alaska corporations controlled by the Morgan-Guggenheim syndicate, discussed the syndicate's plans for the development of Alaska after the annual meeting of two of the subsidiary companies here yesterday.

We expect to complete the Copper River & Northwestern to the Bonanza Copper mountain by November 15," said he. By January 1, we will be operating clear through from the Cordovado Bonanza.

We have the money appropriated and are ready to commence the construction of a railroad from Katalla to the Bering river coast as soon as coal can be secured to ship.

"We will build tracks to the mines owned by any one with coal for shipment and will carry coal at equal rates."

"The opening of these coal mines is of great importance to the development of Alaska and especially for the operation of railroads. We are now paying \$12 a ton for British Columbia coal to operate a 100-mile railroad and I cannot see the object of conserving this coal for posterity. Especially as posterity has not done much for this generation."

LOOKING OVER OLD PRODUCER OF TECOMA
General Manager Harmon of the Tecoma Mines company has left for the property for the purpose of getting out another shipment of ore, which is now sacked at the mine. It is understood also that Mr. Harmon will make an examination of the Tecoma Consolidated Mines company's possessions, a group now controlled by the Tecoma Mines, and being between it and the Salt Lake Copper company.

The Consolidated property at one time was a good shipper of silver and lead ore, although at a very great depth has been secured. The vein system is the same as that of the Tecoma Mines, and it is likely that Mr. Harmon and associates will become interested in the property, that they will hasten the property to the producing columns just as the Tecoma Mining company has done. The group consists of eight claims.

This old district is showing very satisfactory proportions at the present time, and it should continue its good record during the summer.

STOCK EXCHANGES WILL TAKE GOOD HOLIDAY
Owing to the fact that Monday is Decoration day, the New York, Boston & San Francisco stock exchanges will take a holiday both Saturday and Monday. There will be no markets, therefore, from Friday until Tuesday.

The New York stock and mining exchange will adjourn Friday evening until the following Tuesday morning also.

OPOHONGO HAS PLENTY DEEP SHIPPING ROCK
William Hatfield of Provo was a Salt Lake visitor on Thursday. Mr. Hatfield is looking over the Opoihongo property, which is being extremely satisfactory. The management has four men working on ore on the 1400 level, and Mr. Hatfield says they have plenty of ore to work on, sending in from three to four cars a week of first-class rock. The company has twenty-eight men working on development in various sections of the property.
